

ABSTRACT

A system and method for conducting accounting operations related to account payable according to procurement data and payment data obtained from external systems. The system includes a database server (3) for storing account payable data; an application server (2) electrically connected with the database server for accessing and processing data stored in the database server; and a plurality of client computers (1) electrically connected to the application server for downloading data from and uploading data to the database server. The application server can visit a procurement management system (5), an inventory management system (6) and a bank note management system (7) and access data therefrom via a communications network (4). Thus, the present invention can directly conduct accounting operations related to account payable according to obtained procurement data and payment data.
